

Sprite (Private only practice management software)

spCompliance (Compliance management)

GDPR (New patient private data processing regulations)

It's just the bear necessity

No NHS contract? Sprite is just for you

We have provided practice management software to dental practices for many years, but Sprite represents the first software we have sold that targeted only at the private market, specifically for young aspiring dentists who are unable to get any NHS contracts.

Sprite is a derivative of our standard software without the NHS treatments and claims module. For this reason it is a more cost effective proposition for the young aspiring dentist, since they are not paying for a service that they cannot use.

Sprite is full, feature rich software which is also very flexible. It can be set-up to hold all patient data on a local server within the confines of the dental practice. Or it can hold the data in a remote location, commonly referred to as being in the 'cloud', from which it may be extracted to certain external locations.

Communication with patients can be by email or text message, or by using an extensive mail-merging facility. You can also input clinical notes into the software by voice if you wish.

There is full tooth charting, periodontal charting, treatment plans, medical questionnaires and money tracking and powerful appointment book available as you would expect. There is also a powerful appointment book within the software.

We include a full list of features overleaf.

Sprite plus spCompliance? That is full practice management

Significantly, by attaching spCompliance and GDPR to the Sprite practice management software we achieve a further gain. If and when there is a complaint or challenge from a patient regarding their 'rights' under the GDPR, you will be able quite easily to make notes on the patient and monitor the processing of the complaint as is required. The combination enhances both compliance and practice management.

Sprite Practice Management Software Features

Reception

Powerful flexible appointment book to make, move, cancel or schedule appointments. A clever use of colour shows the treatment charge basis. Navigation using icons and calendars form the basis of recall and reminder system

Patient self-check-in terminal to take pressure off reception at busy times

A detailed system for tracking money flow in the Practice, for invoicing and payment of treatments and sundry products, producing refunds and credit notes when appropriate; A deposit system exists to handle extended courses of treatment. It tracks patient accounts and permits allocation of private fees between performers

Internal messaging exists to communicate between all terminals in the Practice

Surgery

A medical questionnaire is taken at each visit and the patient's disclosed state of health and prescriptions taken

Plans for private treatment are simply displayed and recorded and marked if performed

The existing state of the mouth and proposed treatment are displayed on a detailed visual chart of the mouth. Teeth charting entries can be made with use of keyboard, or mouse and drop down list

Periodontal treatments and recordings are made and displayed visually on to a patient periodontal chart

Sprite can retain and display 'tooth' notes, surgery notes and medical notes using the inbuilt word processor

Sprite has an image capture module for use with an intra oral camera or with leading X-ray imaging systems

Fee-scale for private treatment and sundry products

Office

Flexible word processor included in software

Recalls, reminders and other communications can be made by text messaging, emailing or letters

Fast Scanning and storage for documents and medical questionnaires

Cloud Server

The patient data can be retained in the Practice or held remotely but connected to all permitted terminals from inside the Practice or external to it. This offers wide flexibility. Patient data may be backed up locally or on the Cloud

spCompliance

It provides structure within which to place practice policies, protocols and tasks, creates schedules to keep compliance and GDPR up to date and enables simple monitoring of the regular tasks required to satisfy compliance
